Ensuring that no baby is born with HIV is an essential step towards achieving an AIDS-free generation. An intervention known as "prevention of mother-to-child transmission of HIV," or PMTCT, provides drugs, counselling and psychological support to help mothers safeguard their infants against the virus.

UNICEF - Children and HIV and AIDS - The First Decade of Life

Abstinence is the only 100% effective way to prevent HIV, other sexually transmitted diseases (STDs), and pregnancy. The longer you wait to start having oral, vaginal, or anal sex, the fewer sexual partners you are likely to have in your lifetime. Having fewer partners lowers your chances of having sex with someone who has HIV or another STD.
