Despite relatively recent declines in age-adjusted mortality, in 2013, cardiovascular disease (CVD) was the primary cause in nearly 801,000 deaths (30.8% of total deaths) in the United States. [In fact, CVD has been the leading cause of death in the United States for the past 100 years, except for 1918. [] Although CVD age-adjusted death rates are reportedly declining in the United States ...

Primary and Secondary Prevention of Coronary Artery Disease

Coronary artery disease (also called coronary heart disease) is the number-one killer of both men and women in the United States, and it's the most common type of heart disease. This often preventable disease causes the dangerous thickening and narrowing of the coronary arteries—the vessels that bring blood to the heart—which disrupts the flow of oxygen and nutrients to the heart, causing ...
