Chapter 15 Darwins Theory Of Evolution - ProProfs Quiz
Darwin's theory of evolution (Chapter 16) Natural selection is a natural process through which life evolves. It acts on populations whose individuals must struggle for existence and that have both heritable variation in traits and variable fitness among individuals.

DARWIN'S THEORY OF EVOLUTION - Ch.16
Between the return of the Beagle on October 2, 1836, and publication of Origin of Species in 1859 (and, indeed, until the end of his life), Darwin relentlessly pursued empirical evidence to corroborate the evolutionary origin of organisms and to test his theory of natural selection, which he saw as the explanatory process accounting for the adaptive organization of living beings and their diversification and change through time.
