The audiobooks are read by volunteers from all over the world and are free to listen on your mobile device, iPODs, computers and can be even burnt into a CD. The collections also include classic literature and books that are obsolete.

Dna Scissors Lab Answers

When EcoR1 cuts DNA, it leaves single stranded "tails" called sticky ends, because they could stick (although not very tightly) to other segments of DNA that have been cut with the same enzyme. (Remember this trait of restriction enzymes, because these sticky ends can be useful for re-joining the cut DNA - even if the DNA pieces originally came from different species.)

Excerpts from AP Biology Teachers Discussion Group: Tip: "One of the tricks I've discovered is to use wood splints for spooling, rather than glass rods. We save it in capped vials in 50 percent ethanol for years. It stays in the refrigerator (although that probably is not necessary) and keeps looking cool. I think Doris Helms' lab manual says to use 60° C rather than 40 to 50." —Barbara ...

Dna Scissors Lab Answers

They act as DNA scissors, cutting the foreign DNA into pieces so that it cannot function. A nuclease is any enzyme that cuts the phosphodiester bonds of the DNA backbone, and an endonuclease is an enzyme that cuts somewhere within a DNA molecule. In contrast, an exonuclease cuts phosphodiester bonds by starting from a free end of the DNA and ...
