The extended finite element method (XFEM) is a numerical technique based on the generalized finite element method (GFEM) and the partition of unity method (PUM). It extends the classical finite element method by enriching the solution space for solutions to differential equations with discontinuous functions.

Finite Element Analysis and Application

Finite element analysis (FEA) is used to find the stress distribution for complex geometries. This chapter explores the background to foam material models in FEA; other aspects of FEA are covered in texts such as Shames and Dym (1985). Experiments to validate the models will be critically examined.

A numerical research on magnetohydrodynamic mixed convection flow in a lid-driven trapezoidal enclosure at non-uniform heating of bottom wall has been studied numerically. The enclosure consists of insulated top wall and cold side walls, too. It also contains a heated triangular block ($\text{Rot} = 0^\circ - 90^\circ$) located somewhere inside the enclosure.
