Language And Motor Speech Disorders

Motor speech disorders include two primary categories, apraxia and dysarthria. In order to produce speech, every person must coordinate a range of muscles and muscle groups, including those controlling the larynx with the vocal cords, the lips, the tongue, the jaw and the respiratory system. Movements must be planned and sequenced by the brain and then put into motion in milliseconds with the correct timing and force of movement as the relevant muscles execute planned movements that create ...
