Modules: Time Management in the Modern Workplace | Alison
There is a popular time module available in Python which provides functions for working with times, and for converting between representations. The function time.time () returns the current system time in ticks since 12:00am, January 1, 1970 (epoch).

Python - Date & Time - Tutorialspoint
The Python time module provides many ways of representing time in code, such as objects, numbers, and strings. It also provides functionality other than representing time, like waiting during code execution and measuring the efficiency of your code. This article will walk you through the most commonly used functions and objects in time.
