natural gas liquids a nontechnical guide

Natural Gas Liquids - Natural gas liquids are condensable hydrocarbons that are often associated with natural gas or crude oil. They include: ethane, propane, butane, isobutane, and pentane. Since they are condensable (may be referred to as condensates) they often form in natural gas wells when the pressure begins to lessen.

A Guide to Natural Gas and Natural Gas Liquids

Once natural gas liquids (NGLs) have been removed from the natural gas stream, they must be fractionated into their base components, which can be sold as high purity products. Fractionation of the NGLs may take place in the gas plant but may also be performed downstream, usually in a regional NGL fractionation center.
