Musculoskeletal Pain: Causes, Symptoms, Diagnosis, Treatments

The Musculoskeletal (MSK) primary care e-learning programme has been developed to support clinicians working in primary care as first contact practitioners (FCP) in a primary care environment. In a primary care setting it has been reported that a GP will see 25% of their case load as MSK in origin and it has also been highlighted that using the wider workforce, such as physiotherapists, can improve outcomes, give high patient satisfaction, save time and ultimately costs.

Musculoskeletal Primary Care - e-Learning for Healthcare

Musculoskeletal conditions are typically characterised by pain (often persistent) and limitations in mobility, dexterity and functional ability, reducing people's ability to work and participate in social roles with associated impacts on mental wellbeing, and at a broader level impacts on the prosperity of communities.

Musculoskeletal conditions - WHO

Musculoskeletal diseases are among the most common conditions why patients present to healthcare providers and especially primary care providers. In 30-50% of visits to their practices, patients present because of musculoskeletal complaints. They are a major source of pain, disability and loss of quality of life.

MSK-Ed - Musculoskeletal Education for Primary Care ...

INTERPRETATION: Primary care physicians' management of 3 common musculoskeletal problems was for the most part in accord with panel recommendations. However, the unnecessary use of diagnostic tests, inappropriate prescribing of NSAIDs, low use of patient-centred options such as exercise, and lack of diagnostic suspicion of infectious arthritis are cause for concern.
