Abstract. ASCE Manual 54 "Sedimentation Engineering," edited by the late Professor Vito A. Vanoni, provides both qualitative and quantitative guidance to theoreticians and practitioners with respect to sediment issues and processes associated with the development, use and conservation of water and land resources. It describes the nature and scope of sedimentation problems, details methods of investigation, and presents practical approaches to solution and management.

This set includes two ASCE Manuals and Reports on Engineering Practice (MOP) that focus on sedimentation engineering. Individual titles are listed below. MOP 54 is the classic edition, originally published in 1975, covering sediment control methods for watersheds, streams, canals, and reservoirs. MOP 110 augments and updates the earlier work by presenting the extensive advances in methods of investigation, measurement, and analysis in this specialized field.
